EDUCATION

Faculty of Computer Science, Tanta University

GPA: 3.0 (Very Good)

SUMMARAY

Full-Stack Developer with 1.5 years of professional experience in Node.js and over 2 years of experience with React and Angular. Computer Science graduate from Tanta University with a strong foundation in algorithms, data structures, and software engineering principles. Experienced in building scalable web applications, developing RESTful APIs, and creating responsive, user-focused interfaces. Proficient in modern frontend and backend technologies, with hands-on experience using AI-powered development tools such as Claude, ChatGPT, and GitHub Copilot to accelerate development, improve code quality, debug issues, and explore technical solutions. Passionate about writing maintainable code, solving complex problems, and continuously expanding my technical expertise.

WORK EXPERIENCE

Camp Coding — *Frontend Developer* *March* 2024 – May 2024 *(Internship)*

Contributed to the development of an online courses platform. Gained hands-on experience in building responsive UIs using React. Improved performance and usability through front-end optimization. Increased website speed by 30% .Collaborated effectively in a team environment using Git.

Qardy — *Full-Stack Developer* June 2025 – Present

Currently working on enhancing and maintaining a fintech platform. Responsible for developing robust backend services using Node.js and Express, and creating dynamic, responsive front-end components with React. Working in a collaborative Agile environment.

PROJECTS

Wash-Zone — SaaS Platform : GitHub: Link

Wash-Zone is a scalable SaaS platform designed to build a complete digital ecosystem for car washing services. It connects customers with car wash owners, allowing customers to discover services, place and manage orders, make online payments, and track their requests. Car wash owners can manage their businesses, services, orders, and customers through the platform. The project is currently under active development and will be publicly launched soon.

Arab-Dev — **(Graduation Project) : GitHub: Frontend | Demo: Link**

Arab-Dev is a professional networking platform designed for developers and students, inspired by platforms like LinkedIn with a developer-focused approach. It provides features such as posts, following, personalized profiles, learning roadmaps, podcasts, coding challenges, and technical discussions. The platform aims to create an Arabic-speaking developer community where users can connect, share knowledge, and grow together.

Online Courses Platform : GitHub: Frontend | Backend API |Demo: Link

An online learning platform inspired by Udemy. Managers and admins can create courses and quizzes after subscribing to a monthly plan, while students can browse and purchase courses. The platform also provides user profiles, social interactions, course management, authentication, and payment functionality.

Honey Movies : GitHub: Link | Demo: Link

A movie discovery platform built with Next.js, Axios, Prisma, and the TMDB API. The application includes server-side rendering, dynamic routing, user authentication, API integration for movies and TV shows, and a responsive multilingual interface.

Gym Management System : Front | Back-end

A comprehensive gym management backend built with Node.js and Sequelize. The system provides APIs for managing members, staff, trainers, subscriptions, attendance, and workout classes, helping gyms streamline their daily operations

E-Commerce Platform : GitHub: Link | Demo: Link

A responsive e-commerce platform built with React for buying and selling laptops and smartphones. The platform focuses on a smooth user experience, efficient navigation, optimized performance, and seamless transactions.

SKILLS

Frontend: HTML5, CSS3, JavaScript, TypeScript, Bootstrap, Sass, Tailwind CSS, React.js, Redux, Redux Toolkit, Next.js, Angular
Backend: Node.js, Express.js, NestJS, RESTful APIs
Testing: Jest
Databases: MySQL, MongoDB
DevOps & Cloud: Docker, AWS
Version Control: Git, GitHub
AI Development Tools: Claude, ChatGPT, GitHub Copilot
